# PFANKUCH TAG-BAG<sup>®</sup> FILLER

Packaging Machine for automated Product Packaging in TAG-BAG<sup>®</sup>

---

## Machine Concept

The TAG-BAG<sup>®</sup> FILLER is an innovative packaging machine, designed for the automated / semi-automated packaging of various products in TAG-BAG<sup>®</sup> PP-film bags. In comparison to manual product packaging a significant effect in rationalization is achieved. Simultaneously the product output is increased and packaging costs are dropped. The modular designed machinery concept is based on highly proved PFANKUCH technical components.

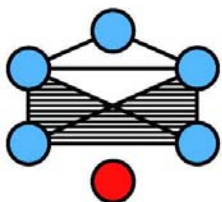

The TAG-BAG<sup>®</sup> FILLER is designed for packaging of different product dimensions and sizes. In this connection the bag filling station is adjusted to customer specific product sizes and demands. Ask us for your specific machine layout and we will be proud to advice you in details.

## Sequence in Operation

The sequence in operation is initiated by a foot pedal signal or a preset operating cycle. A Pick & Place feeder system separates flat TAG-BAG<sup>®</sup> from a magazine stack and feeds them automatically into a gripper chain. The bags are guided automatically to the product filling station, where first of all the bag is opened by a compressed air device. Subsequently the product to be packed is filled into the pre-opened bag manually. Afterwards the product filled TAG-BAG<sup>®</sup> is transported to the sealing station where it is closed automatically by a cut off sealing. Ready filled and closed TAG-BAGS<sup>®</sup> are thrown off in a suitable sump.

## Advantages at a Glance

- Format flexibility for processing of TAG-BAG<sup>®</sup> sizes min. W40 x L100 up to max. W220 x L300 mm
- Simple and fast size modification
- Most simple and ergonomic operation
- Minimal requirements for resources (230 V power supply and 6 bar compressed air supply)
  - Compact machine design - functionality with smallest space requirements
  - Output up to 40 products per minute (depending on product formats)
  - Rapid pay back of investment

# Technical Data

Technical Data	
Output	Max. 40 cycles / min. (depending on product specifications)
Product Sizes	Min. 40 x 100 mm Max. 220 x 300 mm
Voltage	90 – 240 V
Drive	DC-Motor
Air Supply	6 bar
